DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a stable aqueous suspension comprising quizalofop-p-ethyl wherein the beta type crystal is 80% by weight or more plus Sorpol 3353 or Sorpol FL plus Antifoam E-20 or Napco 8034L, does not reasonably provide enablement for the quizalofop-p-ethyl plus all other surfactants and antifoaming agents. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make / use the invention commensurate in scope with these claims. Surfactants and antifoam agents differ in chemical and physical properties and therefore it is unbelievable on the face that all other surfactants and antifoaming agents besides (Sorpol FL, Sorpol 3353, antifoam E-20, Napco 8034L) will stabilize quizalofop-p-ethyl where 80% or more is present as the beta crystal.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1616

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ito et al (USPN 5691276; 11/25/97). Ito discloses examples of suspension compositions comprising 4 parts quizalofop-p-ethyl, 20.5 parts surfactant, and 23.5 parts water. See column 14 example 44. Ito does not teach the composition comprising 80% or more of the quizalofop ethyl in the beta crystal form. However, for the surfactants used in the examples, it is obvious that all crystal forms would work absent a showing of one crystal form being more or less effective than a different crystalline form.
